REPORT.

TO HIS EXCELLENCY JOHN POYNTZ, EARL SPENCER, K.G.
LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

Queen's University, Dublin Castle,
June 1, 1871.

May it please your Excellency,

As Chancellor of the Queen's University in Ireland, it becomes my duty, in compliance with the provisions of Her Majesty's Charter, to furnish to your Excellency the Report of the Condition and Progress of the University since the 1st April, 1870.

The General University Examinations during the period of this Report commenced on the 27th of September, and terminated on the 24th of October, 1870. Examinations for Degrees in the Faculty of Medicine were also held in June, and First University Examinations in Arts and Engineering were also held in April. At these various Examinations 406 Candidates presented themselves. Lists of those who were successful are annexed, and a *App. II* List of the Students Matriculated in the University since the first of October last.

In addition to these Examinations for Members of the University, Examinations of Candidates who are not Members were held in the month of June. Lists of those who were successful are *App. II* annexed.

The principal public meeting of the University, to confer degrees and diplomas, and distribute prizes, and which your Excellency

* In this number the same persons are counted twice wherever they underwent two distinct University Examinations within the year. This happened in 74 cases, so that the number of individuals examined was 332.

was pleased to honour with your presence, was held in St. Patrick's Hall, Dublin Castle, on the 12th of October last. An account of the proceedings is appended to this Report.

The following papers are also annexed for your Excellency's information.

App. III. The Estimate for the year.

App. IV. The Cash Account for the year.

App. V. A Return of the several Meetings of the Senate since my last Report.

I cannot close this Report without expressing to your Excellency my deep sense of the double loss which the University has sustained within one year—of its Chancellor, the Earl of Charendon, by whose skill and care the Institution was founded and brought into form; and of Sir Maziere Brady, who, as its Vice-Chancellor, and during the prolonged absence of the Chancellor, paid an unremitting attention to its gradual development, and by his sound judgment guided it through many difficulties.

I have the honour to be,

Your Excellency's

Obedient and faithful Servant,

KILDARE,

Ch. Chancellor.

APPENDIX.

APPENDIX I.

Appendix.

PUBLIC MEETING of the QUEEN'S UNIVERSITY in IRELAND, held in St. Patrick's Hall, Dublin Castle, on the 12th October, 1870.

I.
Public
Meeting.

AFTER the close of the examinations of the year 1870, a public meeting of the Queen's University was held in Dublin Castle on the 12th October, 1870, for conferring degrees, diplomas, and prizes.

A large number of distinguished persons having taken their places in the Examination Hall, the Most Honorable the Marquis of Kildare, Chancellor of the University, the Senate, the Professors and Examiners, and the Candidates, entered it in procession.

The CHANCELLOR opened the meeting with the following address :—

Your Excellency, my Lady, Ladies, and Gentlemen,—Before making the usual statement of the present condition of the Queen's Colleges, I must express how deeply the members of the Queen's University have to lament the death of the first Chancellor. To the zeal and care of the late Earl of Charvelton, at the foundation of the University and Colleges, they are indebted for much of their prosperity, and though in consequence of important public duties, it was not in his power to take an active part in the proceedings of the Senate, he watched them with the greatest interest. In the course of the academic year, which comes to an end upon this day, the Senate has decided to establish in this University a special curriculum, in which there shall be a predominance of science, and at the close of which there shall be given the degrees of Bachelor in Science and Doctor in Science; and they have inaugurated those degrees by deciding to confer to-day the degree of Doctor in Science, *honoris causa*, upon Professor William King, of Queen's College, Galway, for his distinguished labours in Geological science. Another addition which has been made to the labours of the University within the last year has been in the establishment of examinations for women (applause). The first of these examinations was held last June in Belfast and in Galway. Thirty-three ladies presented themselves for examination, of whom twenty-one acquitted themselves to the satisfaction of the examiners, and in several instances the answering was reported to the Senate as highly creditable.

The year which is now closing has not been without the usual harvest of successes of graduates and students of the Queen's University in various public competitions. At the open competition of 1870 for the Civil Service of India, Mr. Edward Stack, of Queen's College, Belfast, who will this day receive his degree of Master in Arts, was awarded the first place upon answering, which stood higher by 850 marks than the highest score of his competitors. At the same competition, Mr. William Hoey, of the Queen's College, Belfast, and a Master of Arts in this University, obtained third place. Messrs. Finucane, of Queen's College, Cork, and O'Donnell, of Queen's College, Galway, both graduates of this University, also obtained places at the same competition. There were forty appointments made, and 360 competitors for them. In the

Appendix.

 I.
 Public
 Meeting.

competition for the telegraph service of India. Mr. Charles John Nuttall, of Queen's College, Belfast, took the first place, with an interval of 355 marks between him and the second man. Mr. John Perry, of Queen's College, Belfast, who will to-day receive his degree of Bachelor in Engineering, has been this year one of the successful competitors for the scholarships founded by the eminent engineer, Sir Joseph Whitworth, and by him opened to public competition. Mr. Perry had on two occasions previously won Whitworth exhibitions, which are subordinate to the Whitworth scholarships. Mr. Arthur H. Anglin, of Queen's College, Cork, obtained a Scholarship at St. John's College, Cambridge; Mr. William Cooke, and Mr. John H. Thornhill, of Queen's College, Cork, obtained places by open competition in the Public Works Department of India (appause). Mr. Joseph O'Brien, of Queen's College, Cork, a Master of Arts of this University, and who will take his degree of Doctor in Medicine to-day, obtained the second place at the competition for the Indian Medical Service. Doctor Hastings, Dr. Lloyd, Dr. Daniel Martin, and Mr. Arthur B. Smith also obtained places in the same service. Dr. William Sweetman, Mr. William S. Santham, Dr. James L. Sweetman, Dr. Alexander Tromsdel, Dr. Thomas O'Sullivan, of Queen's College, Galway; Dr. William Colahan, of the same college, and Dr. Charles Haines, of Queen's College, Cork, obtained places in the Naval Medical Service by competition.

The principal examinations which have been held in this University since the public meeting of last year, are those which have taken place here during the last fortnight. But there were also University examinations in June last, in May, and in October of last year, shortly after the date of the public meeting. During the year eighteen candidates were examined for the degrees of M.A., of whom sixteen have satisfied the examiners. Fifty-one were examined for the degree of B.A., of whom forty-three have passed; and sixty-seven were examined at the first University examination in Arts, of whom fifty passed. In the Faculty of Law there have been three candidates examined for the degree of Bachelor in Law, and one for the Diploma in Elementary Law, of whom, I am happy to say, all have satisfied the examiners. In the Faculty of Medicine, fifty gentlemen have been examined for the degree of Doctor in Medicine, of whom forty-three have passed; thirty-six for the degree of Master in Surgery, of whom thirty-two have passed; and 131 presented themselves at the first University examination in Medicine, of whom ninety have answered to the satisfaction of the examiners. In the department of Civil Engineering, nine candidates have been examined for the degree of Bachelor in Engineering, of whom eight have qualified themselves for the degree; and sixteen candidates underwent the first University examination in Engineering, of whom eleven satisfied the examiners. There were also examinations held last June for schoolboys at the same time as the examination for women, to which I have already referred (appause).

The degrees and certificates were then conferred upon the successful students by the Chancellor, and the special prizes presented by his Excellency the Lord Lieutenant.

His Excellency the LORD LIEUTENANT rose and said—My Lord Kildare and Gentlemen, I thank you sincerely for the kind manner in which you have received me here to-day. It is one of the most pleasing parts of my duty in this country when I can show the interest which Her Majesty the Queen takes in objects of education; and I am sure that she

takes a very deep interest in the University which is now here assembled (applause). I therefore rejoice when I can offer to you this hall for your meeting, and when I see so distinguished an assembly gathered in it. I rejoice also to hear of the success which has attended the labours of your University during the past year—a repetition of the success which I was glad to hear last year, and which has not diminished I believe in the present year. But while I look back upon the year that has passed since we last stood in this room I cannot but refer to one event which has occurred which is of special interest to this University. I allude to the loss which our country has sustained by the death of a great statesman. I allude to Lord Clarendon, the first Chancellor of your University. He was a statesman of singular ability and experience. He was a statesman with much tact, with much honesty of purpose, and with indomitable industry. He died in the service of his country, while holding high office under Government at a time when the House of Lords was discussing a measure of the greatest importance to this country, in whose service he passed many years of his useful and active life, and whose interest he ever had at heart. Lord Kildare, in the report which he had read to you, has referred to the services which Lord Clarendon did to this University. I know that there are many in this room who could speak of those services, both when he was Chancellor of this University and when he was in the position which I now have the honour to hold. I believe Lord Kildare rightly said that much of the success of your University was owing to the manner in which Lord Clarendon first looked after the interests of the University. I know that he most carefully searched for able and efficient men to fill the important professorial and other posts which he had to give away. I know that he also most anxiously watched to see that no political partisanship should enter into any of the proceedings connected with the Government with regard to this University. I feel that the first steps of this University were ably guided by Lord Clarendon. I wish I could more ably touch upon this subject, for, whether as a statesman, whose career has been of benefit to the country, or as a man whose charm of manner, kindness of disposition, and wit gathered round him a host of friends, we all, I am sure, in this country wish to do honour to his memory. I feel most anxious to do so, for to me he always acted as a most kind friend, ever ready to give me advice whenever I needed it (applause).

Lord Kildare, you will allow me to congratulate you on this the first occasion on which you have presided over this University as its Chancellor (applause). The interest which you have always shown in education in this country, the care and attention with which you have worked on several important commissions connected with Irish education and Irish art, your constant residence in this country will, I am sure, enable you to perform the important duties of your office with advantage to the University (applause). May I add that this is not the first work that either you or your family have done for the sake of the education of the country. No one has been a more constant friend of education, or a more constant worker for the Queen's University than Lord Kildare's father, the Duke of Leinster (applause). I would refer very shortly to one or two other matters. I rejoice to hear of the success of several of your candidates—success which is only repeated from last year—in the great public examinations which take place for the Civil Service of India and other parts of the empire; and I wish to refer to a great and important change which has taken place with regard to the public service during the past year. I allude to the throwing open of the public service—almost the whole of the public service, for I believe there are very few

Appointed.
I.
Public
Meeting.

*Appendix.*I.
Public
Meeting.

offices in which the new change is not to operate—to public competition (applause). I look upon that as a most important change, important for the government of the country, for it will widen the basis on which the public service of this country is founded; it will open it not to any privileged class, but it will open it to the whole nation who reside within the United Kingdom. It will open now to any person of ability who has used the opportunities which have been offered to him of education, a sphere where he can get an ample competence with honour to himself; and in future, I am happy to say, the entry of anybody into the public service will not depend upon political favour; it will depend on a man's own high character, and on his own ability and talent (applause). Now, we have seen how successful some of your students have been in public examinations. They are good pioneers for the work which is now open to you on a larger field. We have heard how Mr. Stuck (applause) distinguished himself by heading by a long way all other candidates in the Indian service competition. I hope others may follow his example.

I have referred to the statistics of public examinations, and I find that they are very satisfactory with regard to Ireland. The two public services which are opened up—the Civil Service of India and another smaller public service, the interpreterships in China and in other countries—have been conducted on the principle of open competition. Taking the period from 1858 down to the present time, I find that there have been 758 candidates. Out of these 150 were born in Ireland, and 137 were educated at Irish universities. There have been 33 candidates appointed for the student interpreterships in China since 1861. Of these 15 were born in Ireland, and 10 were educated in Irish universities. Now, I think these are satisfactory figures, for if we compare the population of this country with the population of Great Britain, we find that the successful Irish candidates almost exactly represent the proportion of the population of Ireland to that of the rest of the United Kingdom. Now, I think this is of great importance, because in Ireland there are certainly not all the advantages in education which are to be found in the sister country. And another thing, these examinations for India, if I mistake not, took place in London, and it may be supposed that there was some difficulty for those who lived in Ireland to go over to London for the purpose of the examination. I hope that in the public examinations which will now take place this may be remedied, and that those who conduct the examinations will be able to hold them in different parts of the country—in Ireland and in Scotland, as well as in England. I believe that this act of the Government will have a deep importance for the country. It will give a great stimulus to the education of the country, for I believe, as the Chancellor of the Exchequer lately said, it ought to affect every part of the United Kingdom. I trust sincerely that this will be the case, and I trust that this University, which has already done much good for education in Ireland, may feel its influence, and may have more assistance in the way of preparatory examinations, and that the students who come up to it year after year may most anxiously attend to the studies which are given to them. And in conclusion I would say to those upon whom degrees have been conferred here to-day, let them go forth in the world to do their work with earnestness of purpose and loftiness of principle; let them, while they are following their own advancement, use their work for the benefit of their fellow-men in the advancement and prosperity of their country (loud applause).

Their Excellencies then withdrew, and the proceedings terminated.
